KUGTI

SIZES

S-XXL

COLORS

deep orange / red
red / blue beat
blue beat / deep orange

Dynamically designed down jacket for winter outdoor use. The cut is move friendly so the jacket will not move up during any kind of activities. The wide-open zipped front pockets are placed high enough to be accessible when carrying a backpack with closed hip belt. There is also an additional easy accessible pocket on the chest for a smartphone or a wallet. On the inner side there are two open pockets to carry winter gloves or goggles and a practical zipped pocket to turn the jacket into a down pillow. The padded hood is adjustable in two dimensions to be as close to the head as possible. The bottom of both sleeves is equipped with stretch cuffs with thumb holes. Ladies' version has the same features and is tailored to fit better women's silhouette.

Fabric: 100% Polyamide
Filling: duck down 90/10
(600 cuin)

A female rock climber is shown in a close-up, smiling at the camera while climbing a grey rock face. She is wearing a bright yellow helmet with a red circular logo featuring a black silhouette of a mammoth. Her black jacket has orange accents and the word 'MILO' printed in white on the left sleeve. She is secured by a purple climbing harness and is holding onto a rope with a yellow and green striped sling. The background is a blurred view of a mountainous landscape with green trees and brownish-yellow vegetation.

A wide-angle photograph of a skier in silhouette, descending a steep, pristine white snow slope. The skier is positioned on the left side of the frame, leaving a trail of tracks in the snow. The background reveals a vast, panoramic view of a mountainous landscape under a dramatic sunset sky. The sun is a bright, glowing orb near the horizon, casting a warm orange and yellow light across the sky and the distant mountain ranges. The valleys below are filled with snow-covered fields and patches of dark evergreen trees. A small, calm lake is visible in the distance, reflecting the soft light of the setting sun. The overall mood is serene and adventurous, capturing a moment of solitude in a breathtaking natural setting.

FIRST AID BOX

SIZE 20x40cm
COLORS red/grey

Characteristic wash case for medicines and hygiene products. Bright red color helps to find it in luggage. Available in two sizes

CEVE

SIZE 20x40cm

COLORS ● grey

Durable cover for a pair of crampons made of Midora fabric. The lining prevents from damage, rubber band closure enables easier packing.

RAINCOVER

COLORS ● black
Characteristic wash case for medicines and hygiene products. Bright red color helps to find it in luggage. Available in two sizes

ARGO

SIZE 66x18cm
COLOR ● black

Water-proof cover for a karrimat with a cord closure and handle at the bottom.

BIVY BAG

SIZE 75 cm (top), 50 cm (bottom)
WEIGHT 350g
COLOR ● black

Fully taped, waterproof bivouac sack.

- Aquatex membrane;
- all seams taped, zips covered;
- lightweight and space-saving thanks to supplied carrying bag;
- size and shape specific for Milo sleeping bags.

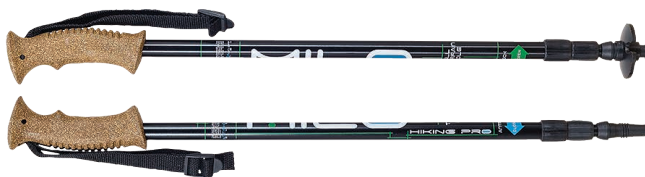

UGO

COLORS ● black

Gaiters combining the benefits of light waterproof membrane upper part with a robust lower part. Full length front zip closure and hypalon fastening straps.

Fabric: Aquatex
MIDORA

CRUISE TT

WEIGHT 670g
GRIP ergonomic, cork

Basic 3-sections 6061 alloy trekking poles with antishock system, comfortable and durable grip for long walks or trekkings, easily adjustable length of maximum 135 cm and a pair of basic baskets. Compact size and weight are the assets of the reasonably priced, yet good quality set of poles.

CREEK

COLORS ● ● ● grey/black, red/black, black

Heavy duty gaiters available with easy front zip closure. Equipped with durable Hypalon fastening straps and adjustable top circumference.

Fabric: MIDORA

CRUISE GT

WEIGHT 570g
GRIP ergonomic, EVA

All-round 3-section trekking poles made of lightweight 7071 alloy. EVA handle along with 20 cm EVA tube provide multiple grip possibilities and 2 pairs of baskets help in difficult terrain conditions. Reliable Clip Lock length adjusting system helps to set the perfect position of the 135 cm long pole.

WALKER

COLORS ● ● grey, black

Basic snow gaiters for tough conditions. Equipped with Hypalon fastening straps and easy rear closure with a velcro and snap buttons.

Fabric: MIDORA

CRUISE FR

WEIGHT 550g
GRIP extended, EVA

2 sections-poles made of 7001 alloy, designed for ski touring and freeriding. Ergonomic EVA grip plus 30 cm long EVA tube on the top section provide flexibility in demanding slope conditions. Equipped with regular and powder snow baskets. The maximum length of 140 cm is adjustable with stable Clip Lock system.

MEMBRANE

Gelanots® – membrane created by the Toyota Tsusho Corporation, one of the leading trading houses in Japan with leading technologies for waterproof, breathable fabrics for the sportswear, sportfashion and other high end apparel applications. Gelanots® quickly gained confidence of the newest generation fabrics' enthusiasts all over the world. This smart fabric is created in several versions, including the ones used by Milo Sport: • 3-layer Ultralight (80g/m²), where the outer ripstop layer is combined with breathable and waterproof membrane; • 3-layer Lightweight with mechanical Stretch (140g/m²). All versions of Gelanots® membranes have excellent waterproof performance up to 22.000mm/H₂O and breathability up to 70.000g/m²/24h. As a result of this, products provide an efficient moisture transport away from the body, avoiding process of condensation. Gelanots® laminates are not microporous so they retain their windproof, waterproof and breathable qualities independently from time of use.

Aquatex™ – these fabrics comprise a group of different materials covered with a layer of microporous polyurethane. This layer manages to achieve two opposing characteristics. Because particles of water are bigger than the micropores, Aquatex is waterproof and windproof. On the other hand, the molecules of vapour produced by a body during physical exertion are much smaller than the polyurethane micropores, so perspiration can permeate through the outer layer of material where it evaporates into the air. This effect is known as "breathability", maintaining a natural microclimate near the skin and reducing the sensation of overheating and discomfort due to moisture remaining between outer clothes and body

INSULATION

Primaloft® Sport – the perfect combination of high performance insulation and value. This technology combines ultra-fine and multi-diameter fibers for specific performance characteristics. The specially treated ultra-fine fibers help to form a water resistant insulating structure, while the multi-diameter fibers help to build loft. Primaloft® is currently one of the best alternatives to down. Milo Sport uses the most universal insulation weights: 100g/m² and 60g/m².

Softshell 2LF – 2-layer fabric constructed of 4-way stretch outer layer bonded to a fleece inner layer. It offers maximum freedom of movement combined with warmth, softness and wind protection.

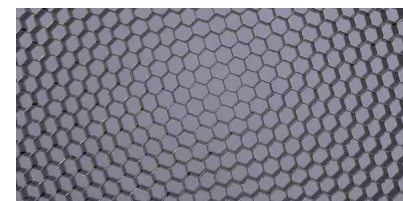

Polartec® is a trade mark and registered in United States and in other jurisdictions for fabrics available only from Polartec Inc. "Times" magazine hailed Polartec® products one of the greatest inventions of the 20th century.

Polartec® Thermal Pro® Recycled – a group of knitted fabrics made of polyester fibers with excellent isothermal properties. The Thermal Pro® range offers unique insulation properties while moving the moisture away from the body. Very soft and breathable, they are rugged, do not change their outer appearance and are resistant to pilling. Since a few years we are using the environment friendly version of this fabric to give a little help to our mother-outdoor.

Polartec® 100 Micro – these fabrics are the standard for lightweight warmth and breathability. Tight knit construction features 100% polyester microfibrils and dries quickly. These durable, non-pilling fabrics maintain their insulation ability after repeated cleaning. 100 Micro fabrics keep you warm and comfortable in a wide range of conditions.

Polartec® Delta™ – was created so cooling fabric technologies could better utilize the body's natural cooling process: sweat. Next-to-skin fabrics that target wicking and fast drying will keep moisture moving, but don't work towards actually cooling the body down. Delta™ works more efficiently by elevating touch-points for increased airflow, faster moisture dispersal, and reduced wet-cling.

Nanoqpile – group of fabrics which are chosen and developed after targeted testing to get the best possible characteristics and performance, suitable for a broad spectrum of insulation appliances. They can be thermoactive and stretch when used for manufacturing performance garments (Nanoqpile Stretch), warm, skin friendly and appealing for manufacturing everyday jackets (Nanoqpile 2) or comfortable and technical for light weight fleece jackets (Nanoqpile 1).

TECHINCAL

Extendo – 4-way stretch fabric with a robust outer- and moisture regulating inner surface. Made from polyamide and elastane fibers (92% / 8%). Extendo dries rapidly is highly elastic, retains its shape and is light and breathable making it a first choice for all active travellers, trekkers and climbers.

Extendo WN – heavier and thicker version of Extendo. Increased density and warmer inner finishing make the fabric especially suitable for lower temperature use providing better wind and thermal protection. Used for production of garments for intense usage like ski touring, climbing etc.

Supplex® – fabric manufactured by Invista company that combines softness and grip of cotton and all best properties of polyamide. It is resistant to tearing and abrasion as well as breathable. Thanks to thin polyamide fibres used for manufacturing, it is up to 30 % softer than standard polyamide fabrics.

Cotton Stretch – a 4-way stretch cotton fabric with and addition of 5% elastane yarn. Thank to its great comfort, the fabric is a very good choice for manufacturing appealing climbing and bouldering garments.

Eclipse – group of lightweight, pilling resistant, technical knit fabrics with good moisture management, which wick moisture away from the body to the next layer of the clothing. Eclipse has a soft feel, dries rapidly and is very breathable. Available in different mixtures of polyester, elastane (Eclipse Stretch) and cotton (Eclipse Cotton).

Midora – fabric made of a mixture of polyester and polyamide fibres with 600D and 1000D thicknesses. Midora is highly durable and abrasion-resistant, making it excellent for backpacks, travelling and trekking accessories. It comes with a water resistant polyurethane coating.

Milo Sport reserves the right to modify any of the products presented in the catalogue, if it considers it appropriate. Note: Because of the limitations of the printing process, the colours of the products shown in this catalogue do not always match the real shades of fabrics used. Should any doubts arise, please consult the company. All products presented in the catalogue have the benefit of our two-year warranty for workmanship and fabrics. Warranty claims can only be considered upon submission of the warranty card attached to each product. Care should be taken while maintaining our products and the special, written instructions for use provided with each product should be followed. **Warranty conditions:** The warranty card allows the purchaser to exercise their rights, under the warranty. Milo Sport products identified with our warranty label have a 24 month warranty for all design and fabric defects and for workmanship, which shall be to the standards set by the company. Repairs undertaken under warranty do not extend the warranty period. The warranty does not cover mechanical damages caused by the use, or wear of elements and damages resultant from non-conformity to the instructions for use. Your statutory rights are unaffected.
